DIGIT

Technology Update

Global Network Forum, Cannes – 31.05.2023
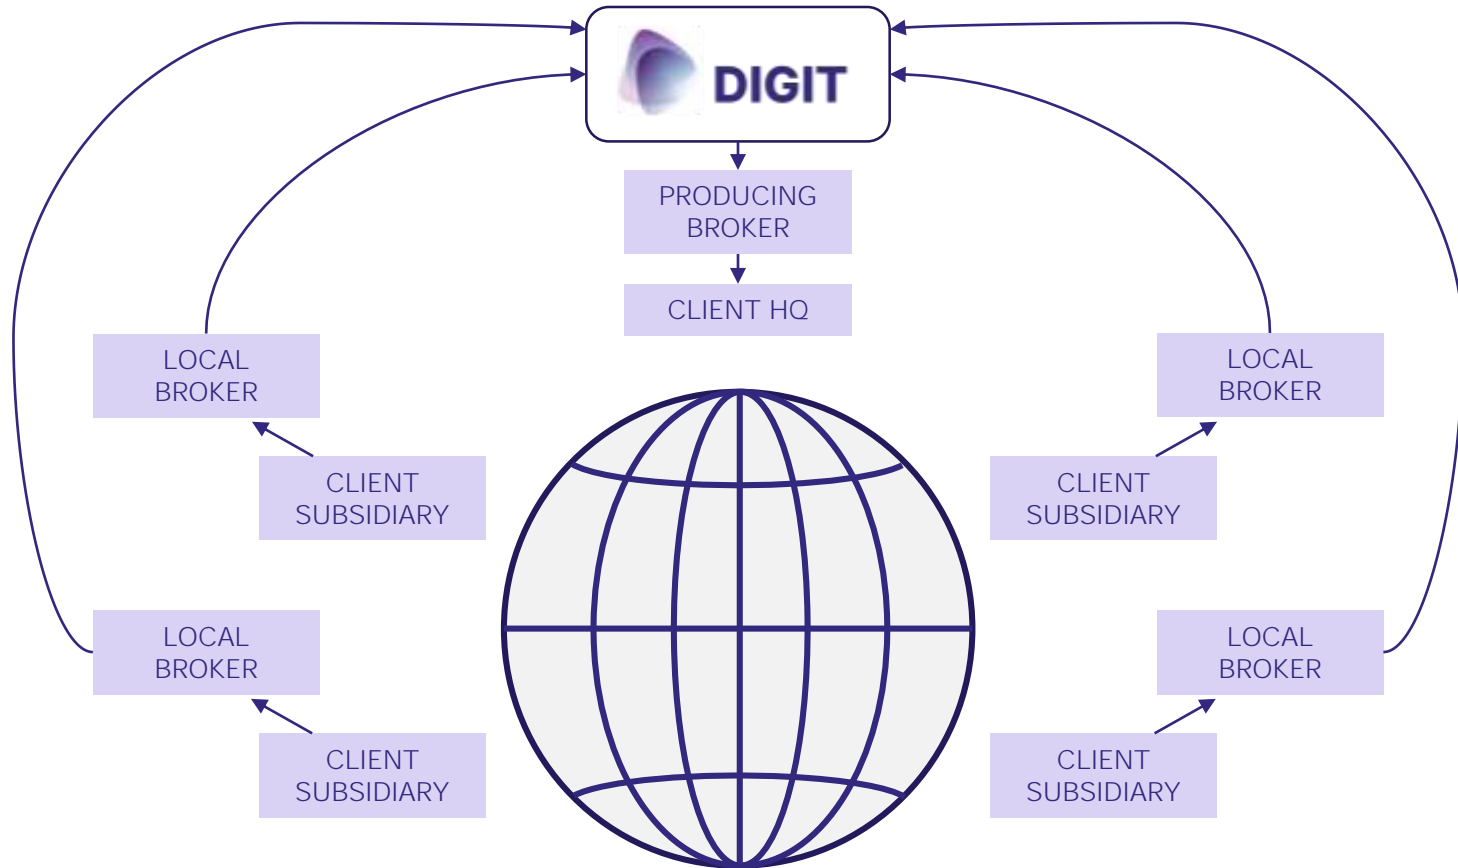

Darius Baltsch | Deputy General Manager

WHAT IS DIGIT?

"A global insurance information management system designed to collect, prepare and manage insurance policy data"

‣ **Global Data**
DIGIT supports insurance intermediaries to provide their customers with information on their clients' local & global insurance coverages, premiums, commissions & fees

‣ **Reviewed & Verified**
All insurance data is entered by the local insurance brokers and subsequently checked and confirmed by the TRC account management department

‣ **Reporting**
DIGIT is able to generate visually supported pdf-reports on the clients' individual local branches or a comprehensive report that includes all international branches

‣ **Revenue Sharing**
Premium & commission/fee information is collected and processed using the sharing agreements with producing and local brokers to enable revenue sharing

CENTRALIZED REPOSITORY, DECENTRALIZED COLLECTION

BENEFITS

‣ **Centralized global policy information**
without the need for central data
entry and maintenance

‣ **Detailed client reporting**
gives insights into clients' global
insurance policies – an immediate
value add for any broker

‣ **Secure & easily accessible**
through all modern browser
applications without the need for
additional installations

‣ **Storage/ retrieval of policy data**
customizable by assigning „roles" –
clients only see what they are
supposed to see

‣ **Simple but versatile system**
since policy summaries are adaptable
to the coverage/s that they look to
capture

‣ **1-Click to key policy facts & figures**
with the option to attach entire
documents if a more detailed view is
required

FOR WHOM?

‣ **Companies** > Creating transparency of corporate risks, policies and losses around the globe

‣ **Brokers** > Seeking a global network and professional advice in digital transformation matters

‣ **Insurers** > Helping to meet requirements of their international customers

SOFTWARE PLATFORM

‣ TRC uses its own **cloud server –** hosted in Hamburg, including the company database Microsoft SQL Server

‣ The programming is **agile** and the software receives **new functions** regularly

‣ **Multitenant** capable software – able to work together on DIGIT, while partners can present it as their own software > **White-labelling**

‣ Security Implementation was successfully **externally audited** in 2020 (by means of a penetration test) with no critical results

DIGIT Plus

‣ **Dashboard**
At a glance analyis of the portfolio including year-to-year premium development, policy status, commissions, revenue shares, and more

‣ **Extended Reports**
Flexible report creation where the result is custom-fit to the needs of the broker or client

Reports now also available in data formats that enable further utilization

‣ **Claims**
Record First Notice of Loss and capture important information throughout the entire duration of a loss event – from occurrence up to resolution

‣ **Assets**
Keep track of the most valuable assets and upload supporting information to aid in the risk transfer

Display Digital Twins of risk locations through our partnership with DiConneX
